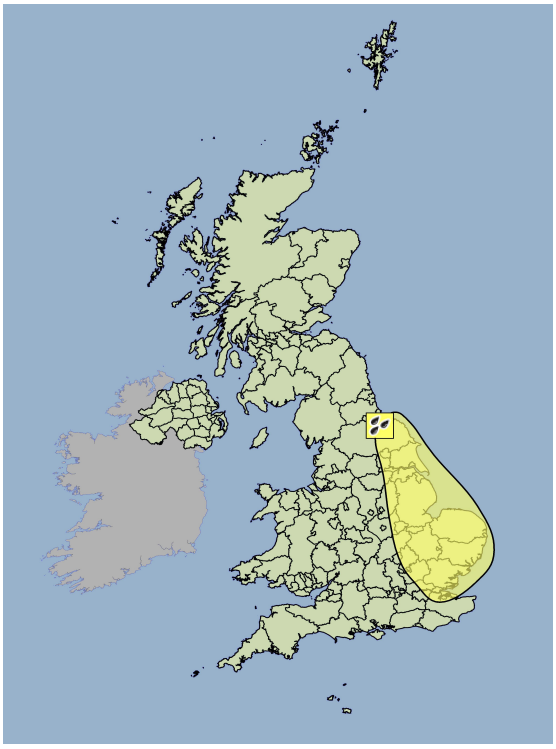
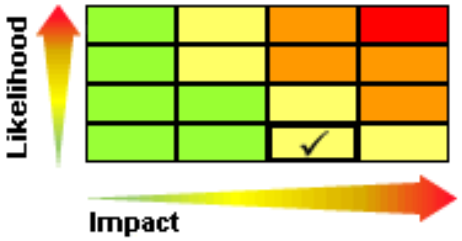
National Severe Weather Warning Service





Chief Forecasters Assessment
Temperatures into the mid-twenties degrees Celsius seem likely to trigger scattered heavy showers and thunderstorms from mid- afternoon and through the evening. There is the risk of 20-30 mm of rain falling within an hour in a few places, although as is often the case with showers, many places will miss the heaviest rain and some areas will escape with a dry day.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **16:00 on Sat, 12th Jul 2014** until **22:00 on Sat, 12th Jul 2014**

Heavy showers and isolated thunderstorms are likely to develop over some eastern parts of England later this afternoon and through the evening.

The public should be aware that localised downpours could lead to temporary surface water flooding.
